CORESTREAM

Intuitive technology for business

Information Asset Management

A leading Information Governance software platform

The Challenges

Administrative Burden

Maintaining the myriad of spreadsheets and coordinating manual processes for identifying and updating information governance related content is inefficient, costly, error prone and makes collaboration difficult.
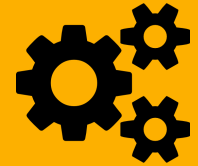

Lack of Accountability

Lack of clear ownership and accountability presents challenges to satisfying regulatory requirements and driving improvement.

Lack of Transparency

Lack of real time insight hinders decision making and makes prioritisation difficult.

The Solution

The Benefits

Manage

An online Information Governance software solution enables the creation and management of Information Asset Registers, Information Flows, Data Protection Impact Assessments, Subject Access Requests, Breaches and more.

Monitor

Automated asset risk alerts, approval workflows and scheduled review tasks ensure Information Governance is up to date, accurate and results in the efficient prioritisation of corrective and improvement action.

Execute & Report

Generate Data Flow Mapping reports to see the flow of information between assets and systems..
Real-time monitoring and reporting of the status of information assets and related content
Reporting around Records of Processing Activities linked to assets and information flows.

Reduces the risk of fines from the ICO

Helps integrate Information Governance activities

Assigns accountability and reduces admin costs

Provides real-time insight

Information Asset Management
A leading Information Governance software platform

The Detail

- Centralised Asset and Flow Registers.
- Configurable workflows.
- Automated risk profiling.
- Process mapping.
- GDPR capabilities.
- Integrated Information Governance.
- Real time insights.

CoreStream Information Asset Management helps alleviate the administrative burden of information governance, and enables teams to focus on value-add activities. It facilities the identification, documentation and management of your company's information assets and related content, and enables the seamless monitoring and execution of actions to deliver the real-time management information that organisations require. Specifically:

Information Asset Management

- Document and manage information assets and information flows on a single platform, with optional process mapping views.
- Map information assets to information flows, processes, Data Protection Impact Assessments, breaches, risks, actions, Subject Access Requests and Freedom of Information Requests..
- Export content into Excel or PDF.

GDPR Obligation Management

- Raise, track and manage Subject Access Requests and FOI Requests, including any resulting actions.
- Grant system access to Data Subjects, enabling them to securely access their case file and data via the platform (negating the need for email).
- Perform annual GDPR role declarations, to ensure your staff understand and attest to their specific GDPR role (Controller, Data Protection Officer, Processor).

Monitoring and Reporting

- Review the risk profile and status of your Information Governance content through real-time reporting dashboards.
- Drill down into content that requires further attention and filter data according to various criteria.
- View your assets, systems and information flows on an interactive process map.

Underpinned by a class-leading technology platform

- Intuitive user interfaces with a clean design and contextual help features to minimise training requirements.
- Real-time dashboards with drill down reporting and flexible filtering options.
- Single Sign On and Active Directory integration to ease the process of gaining access and preserve your control of permissions.
